ABOUT ME

Machine Learning Engineer with 3 years of experience using large-scale datasets to develop and deploy computer vision and large language model solutions - - I am passionate about making tools people actually use.

EDUCATION

Western Washington University, Bellingham, WA, USA

Master of Science in Computer Science

Sep 2024 - Jun 2025

3.9 GPA

Western Washington University, Bellingham, WA, USA

Bachelor of Science in Computer Science

Jan 2021 - Jun 2024

3.6 GPA

EXPERIENCE

Masters Intern

Seattle, WA

Allen Institute for Artificial Intelligence (AI2)

May 2025 - Present

- Created a visual grounding dataset of ~400k screenshots for OCR pretraining of vision language models.
- Filtered dataset to include only successful training samples which improved overall model accuracy by 15%.
- Aided in development of a human data collection tool for collecting real web trajectories of web tasks.

Scientific Machine Learning Masters Intern

Seattle, WA, USA

Pacific Northwest National Laboratory

June 2023 - Present

- Added features to an [open-source project](#) which attracted new users from other domains to our project.
- Built automated experiment pipelines for batch deployment using Slurm allowing for rapid result analysis.
- Developed a strong foundation in control theory, deep reinforcement learning and Generative-AI.

Deep Learning Research Assistant

Bellingham, WA, USA

Hutchinson Machine Learning Research Group

September 2022 - June 2025

- Engaged in weekly reviews of state-of-the-art research for deep learning approaches and techniques.
- Mentored new students by scheduling regular check-ins for progress updates and technical guidance.
- Developed [open-source software](#) to increase accessibility of high-throughput compute to new users.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, Go, Java, C, SQL, HTML, CSS

Libraries / Tools: PyTorch, NumPy, LLaMA-Factory, Pydantic, Streamlit, Slurm, Gymnasium, Flask

PROJECTS / PUBLICATIONS

Web Agents

Summer 2025

Allen Institute for Artificial Intelligence (AI2)

- Developed a vision based multimodal agent to autonomously execute end-to-end complex web tasks.
- Created open source web navigation datasets to accelerate community research of autonomous web agents.
- *The manuscript for this work is in progress and is to be submitted to CVPR 2026.*

STARS: Sensor-agnostic Transformer Architecture for Remote Sensing

Summer 2024

Pacific National Northwest Laboratory

- Developed a vision model that accepts an arbitrary count of spectral measurements, agnostic to sensor.
- Created a Web GUI front end for the visualization and deployment of experiments for domain experts.
- *This work was presented at [IEEE Whispers 2024 conference](#).*

BOSS Net: A Self-consistent Data-driven Model for Determining Stellar Parameters

Fall 2023

Hutchinson Research Group

- Built a CNN to estimate the surface gravity and temperature of stars from near-infrared photometry.
- Released a self consistent 412k spectral training corpus by labelling points from a multitude of sensors.
- *This work was presented at the 2023 SDSS-V Collaboration Meeting and published in the [Astronomical Journal](#).*
